SKILLS

- **Web Development:** Expertise in HTML, CSS, JavaScript, React, Next.js, and TypeScript for frontend development, and Node.js for backend services.
- **Mobile Development:** Experienced in building cross-platform mobile apps with React Native, including state management with Zustand and TanStack Query.
- **Backend & Database:** Strong knowledge of SQL, relational databases, and Supabase (Auth, Database, Storage) for building and scaling backend systems.
- **AI & API Integration:** Hands-on experience integrating third-party and AI APIs, including Google Cloud Vision, Google Imagen, Vertex AI, and Moolre payment APIs, into production features.
- **Version Control:** Proficient with Git for managing code versions and conducting code reviews.
- **Collaboration:** Excellent communication skills with a collaborative and solution-oriented mindset, working cross-functionally with teams.

PROJECTS

TradeShield – B2B Escrow Marketplace

- Architected a B2B escrow marketplace connecting wholesale buyers and suppliers in Ghana, integrating Moolre's Collections and Bulk Disbursement APIs to secure end-to-end payment flows.
- Designed a tiered commission model balancing platform revenue with adoption incentives for new vs. established suppliers.
- Engineered the payment call sequence and dispute-resolution logic to hold funds in escrow until delivery confirmation, reducing counterparty risk between unfamiliar B2B trading partners.
- Scoped a lean MVP to domestic Ghana wholesale only, deliberately deferring cross-border payments and consumer use cases to cut integration complexity and regulatory exposure.

Veylo – AI-Powered Wardrobe Management App

- Built a mobile wardrobe management app in React Native with a Supabase backend, enabling users to digitize and organize their clothing inventory.
- Integrated Google Cloud Vision API to automatically detect and tag garment type, color, and category from user-uploaded photos, eliminating manual data entry.
- Implemented AI-generated avatars and virtual try-on using Google Imagen and Vertex AI, letting users preview outfit combinations on a personalized model before wearing them.
- Designed a rule-based recommendation engine that pairs tagged wardrobe items into outfit suggestions, avoiding the cost and latency of a custom ML training pipeline.
- Shipped an initial release via direct APK distribution to validate core wardrobe-tracking and try-on flows ahead of a planned app store launch.

AquaNet – Fish Farming E-commerce Platform

Backend Developer

- Developed backend using Node.js, enhancing performance and scalability for thousands of users.
- Built RESTful APIs for authentication and product management, reducing response time.
- Optimized database queries and enforced security protocols for reliable data handling.
- Collaborated with frontend team for seamless integration and user satisfaction.
- Led code reviews to uphold coding standards and reduce bugs.

Bookshop Management System

Frontend Developer

- Developed a system to manage book inventory, sales tracking, and student purchases for a school bookshop using React (TypeScript) and Tailwind CSS.
- Implemented features for real-time stock monitoring, low-stock alerts, and purchase history.
- Designed an intuitive UI to enable both administrators and cashiers to manage transactions efficiently.

- Ensured role-based access control to separate user privileges.

WORK EXPERIENCE

Inkventory Solutions Limited

July 2025 – October 2025

Frontend Software Engineer, Intern

- Collaborated with senior engineers to design and implement responsive, user-centered interfaces using Next.js, TypeScript, and Tailwind CSS, enhancing performance and maintainability.
- Collaborated in UI/UX design sprints to translate wireframes from Figma into production-ready components, ensuring pixel-perfect layouts and optimal user experience.
- Contributed to code reviews, Git workflows, and deployment processes, reinforcing clean code practices and continuous integration within an agile development environment.
- Optimized frontend performance by refactoring components, reducing render cycles, and enhancing state management using React hooks and Context APIs.

Kofi Annan ICT Centre of Excellence

March 2025 – May 2025

Software Engineer, Intern

- Collaborated with senior developers on a web development project, gaining hands-on experience in a real-world software engineering environment.
- Participated in code reviews and agile standups, enhancing teamwork and understanding of software development workflows.
- Gained practical experience with modern development tools and best practices in frontend engineering.
- Built user-friendly interfaces using React, contributing to the design and implementation of key website components.

Links Engineering Limited

September 2024 – November 2024

Software Engineer, Intern

- Developed and maintained dynamic webpages using PHP and Laravel frameworks.
- Gained hands-on experience with relational databases, implementing and optimizing SQL queries.
- Collaborated with senior developers to design user-friendly interfaces and backend functionalities.
- Assisted in troubleshooting and debugging web applications to ensure seamless performance.

EDUCATION

University of Ghana – Legon, GHA

BSc. Computer Science

Relevant Coursework: Data Structures and Algorithms, Mobile App Development, Software Engineering, Object-Oriented Programming, Numerical and Computational Methods, User Experience/User Interfaces, Human Computer Interactions, Designing Intelligent Agents, Network Performance Analysis & Modelling, Systems and Network Security
